Introduction :

Cancer is an important health problem and will become increasingly not only in terms of rank order, as infections are better controlled, but also in terms of incidence and mortality, which will both increase as populations continue to grow and age and risk factors for cancer associated with great affluence, such as smoking, changes in diet (qualitative and quantitative), and reduced fertility increase.

Population –based cancer registration involves continuous and systematic collection ,collation (comparing), storage ,analysis and reporting of data on new cancer cases occurring in a defined area (including patients who live in the region ,but seek care elsewhere).

We hope that these statistics could be primary resource not only for epidemiological research on cancer determinants but also for planning and evaluating health services for the prevention early detection diagnosis and treatment of this disease.

ACKNOWLEDGMENT:

This work is completed with the grace and guidance of Allah.

We would like to thank H. E the Minister of health DR. Salih Mehdi Al- Hesnawi for his kindness and help to facilitate our work.

Also we would like to thank Health minister senior Deputy Dr. Aamer Al- Khuzaei who did his best with us to facilitate our hard work

We also would like to thank the ministry of health in Kurdistan region for their help in providing us with the registered cases of cancers in the Northern provinces.

Deep regards are also to the staff of cancer registry units in the health directorates of Iraq, for their participation in preparing the materials of this work.
